
Annex A (normative): National Language Tables

A.1 Introduction

This annex contains character tables for languages that use other scripts than the Latin script, except for 0x10 which is for European languages that use the Latin script. However, all the national language alphabets also support A-Z, a-z, 0-9 and common “western” punctuation. The tables in sections A.2 and A.3 are all deprecated. See section A.4 for recommended tables for SMS, CBS, and USSD. USSD may still use the default alphabet. Note that a recipient that does not support an alphabet specified in A.4 will fall back to the default alphabet, and a-z (lowercase only), 0-9, certain punctuation (important for USSD in particular): +*#^., as well as space and line feed are all in the *same code positions* for all the alphabets in A.4 and the default alphabet (the deprecated alphabets in sections A.2 and A.3 do not completely fulfill this for the listed punctuation).

A.2 National Language Single Shift 2 (SS2) Tables for alphabets 0x01 to 0x0D (deprecated)

The tables here are all deprecated, except that the default alphabet must be used where explicitly called for in the SMS and CBS standards (but is still deprecated for SMS and CBS *messages*), and the default alphabet should still be used for USSD. For SMS and CBS *messages* use the alphabets given in section A.4 or UCS2/UTF16BE (section 6.2.3).
